SUMMARY

Experienced with software development focusing on Machine Learning and proficient in designing and implementing efficient code. Utilizes programming skills to solve complex problems and improve software functionality. Track record of applying detailed knowledge to create user-friendly applications and enhance system performance.

EXPERIENCE

SakhaTech Information Systems Pvt.Ltd

Machine Learning Intern

Jun '25 — Jul '25

Worked on project based on CNNs (Convolutional Neural Networks) which detects values on the pressure gauges in the industries using a pre-trained model and Hough Transforms achieving 96% accuracy.

MathCo

AI Intern

Jul' 26 - Present

PROJECTS

- **Justice Lens** - AI pipeline built for deblurring scanned documents and text extraction using *TensorFlow*, *PyTorch*, used pre-trained model by fine-tuning *Swin2SR Transformer*, *OCR* for text extraction achieving over an accuracy of 93% and Character Error Rate of less than 5%.
- **ColdWatch**- Using ESP32, An organ box built for transportation integrated with temperature and motion sensors with auto-cooling systems based on threshold values for maintaining required temperature inside the box.
- **Optic Log - Digital Attendance Management using AI** - Transforming attendance management through intelligent automation and biometric verification. using *React*, *Express.js* and *AWS Rekognition*.
- **Adhyayana** - AI powered adaptive learning platform using *RAG*, *BGE-M3 embeddings*, *Neo4j graphs*, *S3* and *LangGraph* enabling personalized exam-prep with multimodal understanding and self-correcting AI pipeline.
- **Automatic Pressure Gauge Reader** - *CNN models*, *YoloV8*, *OpenCV*, *OCR* - predicts values on the pressure gauges in industries with 96% accuracy helping in reduction of manual measurement of the values.
- **DeepFake Image Detection** - Classifying the images as “real” or “fake” using traditional CNN architecture trained over 6000 images, including 6 Convolutional and 6 Max Pooling layers for maximum feature extraction for 94% accuracy.
- **Squaado (Ongoing)** - A mobile application built for the use of tracking the performance of athletes and posture analysis using AI mainly using *RTMPose* and *MediaPipe Glaze*, form check of exercises like deadlifts, bench press and squats with bar detection using *YoloV8* model trained on several images based on the mentioned exercises and also ball tracking, bat swing metrics of a bat in different sports like cricket and baseball.
- **Multimodal Thermal-RGB Analysis Of An Image for Early Physiological Abnormality Detection (Ongoing)** - An application built for the clinical use for early physiological abnormality detection by capturing both thermal and RGB images of a specific body part which indicates inflammation and mapping both the images using data fusion for the detection of abnormalities.

SKILLS

- **Programming Languages** - Python, Java, C, HTML, CSS
- **Database** - MySQL, PostgreSQL, Supabase, SQL
- **IoT** - Arduino, ESP32
- **Libraries** - TensorFlow, Keras, Scikit-Learn, YoloV8, OpenCV, PyTorch, Numpy, Pandas
- **Other Frameworks** - FastAPI, Django, Flask

EDUCATION

B.E in Artificial Intelligence and Machine Learning, BNM Institute of Technology (CGPA: 9.2)

Aug '23 — Present

Bengaluru, India

Pre-University, Kumarans PU College (GPA: 97%)

Jul '21 — May '23

Bengaluru, India

PUBLICATIONS AND PATENTS

- **ColdWatch (Patent Applied)** - An box used for the transportation of organs using an auto-cooling system.
 - **Justice Lens (Applied for Paper Publication)** - A real time AI deblurring pipeline for restoring degraded scanned text document
-

CERTIFICATIONS

- **Supervised Machine Learning: Regression and Classification - DeepLearning.AI/Stanford**
 - **Neural Networks and Deep Learning - DeepLearning.AI**
-

ACHIEVEMENTS

- GenXAI Hackathon Winner
