SUMMARY

Experienced with software development focusing on Machine Learning and proficient in designing and implementing efficient code. Utilizes programming skills to solve complex problems and improve software functionality. Track record of applying detailed knowledge to create user-friendly applications and enhance system performance.

EXPERIENCE

SakhaTech Information Systems Pvt.Ltd

Machine Learning Intern

Jun '25 — Jul '25

Worked on project based on CNNs (Convolutional Neural Networks) which detects values on the pressure gauges in the industries using a pre-trained model and Hough Transforms achieving 96% accuracy.

PROJECTS

- **Crop Monitoring System - IoT, using Arduino Uno and Blynk Server** - Built a project where the soil's water requirement is checked and the water supply is given based on the water and moisture levels and soil conditions using specific sensors.
- **Automatic Pressure Gauge Reader - CNN models, YoloV8, OpenCV, OCR** - predicts values on the pressure gauges in industries with 96% accuracy helping in reduction of manual measurement of the values.
- **Predictive Analysis for Sales** - A web-app for Predictive Analysis of Retail Sales (Time series model) achieving 92% accuracy in predicting the future sales of the next 30 days using *Scikit-Learn* for the prediction model, *Flask* framework as the backend and a basic UI using *HTML and CSS* deployed on *Render Platform*.
- **Justice Lens (Deblurring documents and text extraction)** - *TensorFlow, PyTorch*, used pre-trained model by fine-tuning *Swin2SR Transformer*, *OCR* for text extraction
- **Organ Box for Drones** - Using ESP32, An organ box built for transportation using drones integrated with temperature and motion sensors with auto-cooling systems based on threshold values for maintaining required temperature inside the box.
- **Optic Log - Digital Attendance Management using AI** - Transforming attendance management through intelligent automation and biometric verification. using *React, Express.js and AWS Rekognition*.
- **Adhyayana** - AI powered adaptive learning platform using *RAG, BGE-M3 embeddings, Neo4j graphs, S3 and LangGraph* enabling personalized exam-prep with multimodal understanding and self-correcting AI pipeline.
- **DeepFake Image Detection** - Classifying the images as "real" or "fake" using traditional CNN architecture trained over 6000 images, including 6 Convolutional and 6 Max Pooling layers for maximum feature extraction for 94% accuracy.

SKILLS

- **Programming Languages** - Python, Java, C, HTML, CSS
- **Database** - MySQL, PostgreSQL, Supabase, SQL
- **IoT** - Arduino, ESP32
- **Libraries** - TensorFlow, Keras, Scikit-Learn, YoloV8, OpenCV, PyTorch, Numpy, Pandas
- **Other Frameworks** - FastAPI, Django, Flask

EDUCATION

B.E in Artificial Intelligence and Machine Learning, BNM Institute of Technology (GPA: 9.2)

Aug '23 — Present
Bengaluru, India

Pre-University, Kumarans PU College (GPA: 97%)

Jul '21 — May '23
Bengaluru, India
